-

**READ THE FOLLOWING PASSAGE AND ANSWER THE FOLLOWING QUESTIONS.**

**METEORS**

There are lot of objects that we see in the sky. During the day we see the sun. After the sun sets in the evening we see mostly the stars. Not all the lights in the sky that we see are really stars. Of course, we see the moon. Some of the other lights in the sky are planets. Planets revolve around the sun like the earth does.

Once in a while someone will see what they call a shooting star. A shooting star looks like a star that is moving quickly across the sky. Some people believe that seeing a shooting star will bring them good luck. It's hard to find a shooting star because they disappear fast.

The correct name for a shooting star is meteor. Besides very large objects like stars, planets and moon, space has lots of little objects. These can be rocks in space left over from old planets. These objects can be even be as small as a speck of dust. These objects are called meteorites.

Answer the following questions in complete sentences:

1. Where do planets revolve ?

---

---

2. What does a shooting star looks like?

---

3. What are meteorites?

---

---

4. Some people believe that seeing a shooting star brings

- a. Good health      b. Good luck      c. Bad luck

5. The following words have their opposites in the passage. Find and write them.

a. slowly - \_\_\_\_\_

b. small - \_\_\_\_\_
