Global Warming

The climate of the earth is getting warmer. This is the real fact. We have to do something now to stop global warming or the earth will change too much. Global warming is an increase in the temperature of the earth's atmosphere caused by the increase in greenhouse gases. Natural level of greenhouse gases like carbon dioxide keep the earth warm, excess gases from burning of coal and automobiles emissions cause the atmospheric temperature to rise. It affects the whole planet. Here are something you can do to control global warming. They are save electricity, plant more trees, recycle your garbage etc. The poor earth is being overwhelmed by careless human activity and this situation can change if enough people work to save and improve the environment.

1. What is global warming?

2. What causes the atmospheric temperature to rise?
