### Passage comprehension

The Sun is a star around which many planets revolve such as Mercury, Venus, Earth, Mars, Jupiter, etc. The nearest planet to the Sun is Mercury and Neptune is the farthest one. There are a total of eight planets in the solar system.

The sun is a ball of gases like helium, oxygen, carbon, and hydrogen but it has the largest amount of helium and hydrogen gas. The temperature of the outer surface of the Sun is about 5500°C, which is very high. Also, there are some such stars that are bigger and brighter than the Sun in the entire galaxy.

The Sun plays an important role in eclipses. A solar eclipse occurs when the Moon comes between the Sun and the Earth whereas a lunar eclipse occurs when the Earth comes between the Sun and the Moon.

**Q1. Write the names of any 3 planets.**
