4. Regular exercises help to keep the bones and muscles strong. _____
5. Amoebic dysentery is caused by virus. _____.

IV. Match the following.

Column A	Column B
1. Vitamin-A	Virus ()
2. Meningitis	Goitre ()
3. Iodine	Night blindness ()
4. Measles	Bacteria ()

CHAPTER-5 HUMAN SKELETAL SYSTEM

I. Fill in the correct number:

- a. An adult has _____ bones in his/her body, whereas a child has more than _____ bones.
- b. There are _____ vertebrae in our vertebral column.
- c. Our face is made up of _____ bones.
- d. The skull is made up of _____ interlocked flat bones.
- e. There are _____ pairs of limbs in the human skeletal system.
- f. Most people have _____ pair of ribs, out of which _____ pairs of lower ribs are floating ribs.
- g. There are about _____ muscles in our body make up _____ per cent of our weight.

II. Choose the correct option from the box below and write the missing terms:

spinal cord	skeleton	ligaments	tendons	humerus	femur
-------------	----------	-----------	---------	---------	-------

- a. In the upper arm, there is a long bone called _____.
- b. The bone in the upper leg is called _____.
- c. Bones are held together by tough tissues called _____.
- d. The delicate _____ passes through the vertebrae.
- e. The framework of bones in our body is called the _____.
- f. Muscles are attached to the bones by strong fibres called _____.

III. Match the following:

A	B	
1. Rib cage	Vertebral column	
2. Backbone	Bones slide over each other.	
3. Hinge joint	Allows movement in all directions	
4. Gliding joint	Protects the heart and lungs	
5. Ball and socket joint	Allows movement in only one direction	

IV. State whether true or false. Also, if the statement is false, write the correct statement:

- a. Each movable joint has two sets of muscles.

- b. The contraction and relaxation of the bones move muscles.

- c. The upper half of the leg has the shin bone and the calf bone.

- d. The arms are joined to the backbone with the help of shoulder girdles and a pair of collar bones.

V. Read the statements marked as Assertion (A) and Reason (R) and choose the correct option:

Assertion (A): The skull protects the brain.

Reason (R): The face is made up of several bones that help protect the eyes, nose, jaw, and tongue.

- (A) Both A and R are true, and R is the correct explanation of A.
(B) Both A and R are true, but R is not the correct explanation of A.
(C) A is true, but R is false.
(D) A is false, but R is true.
